PATENT & TRADEMARK OFFICE

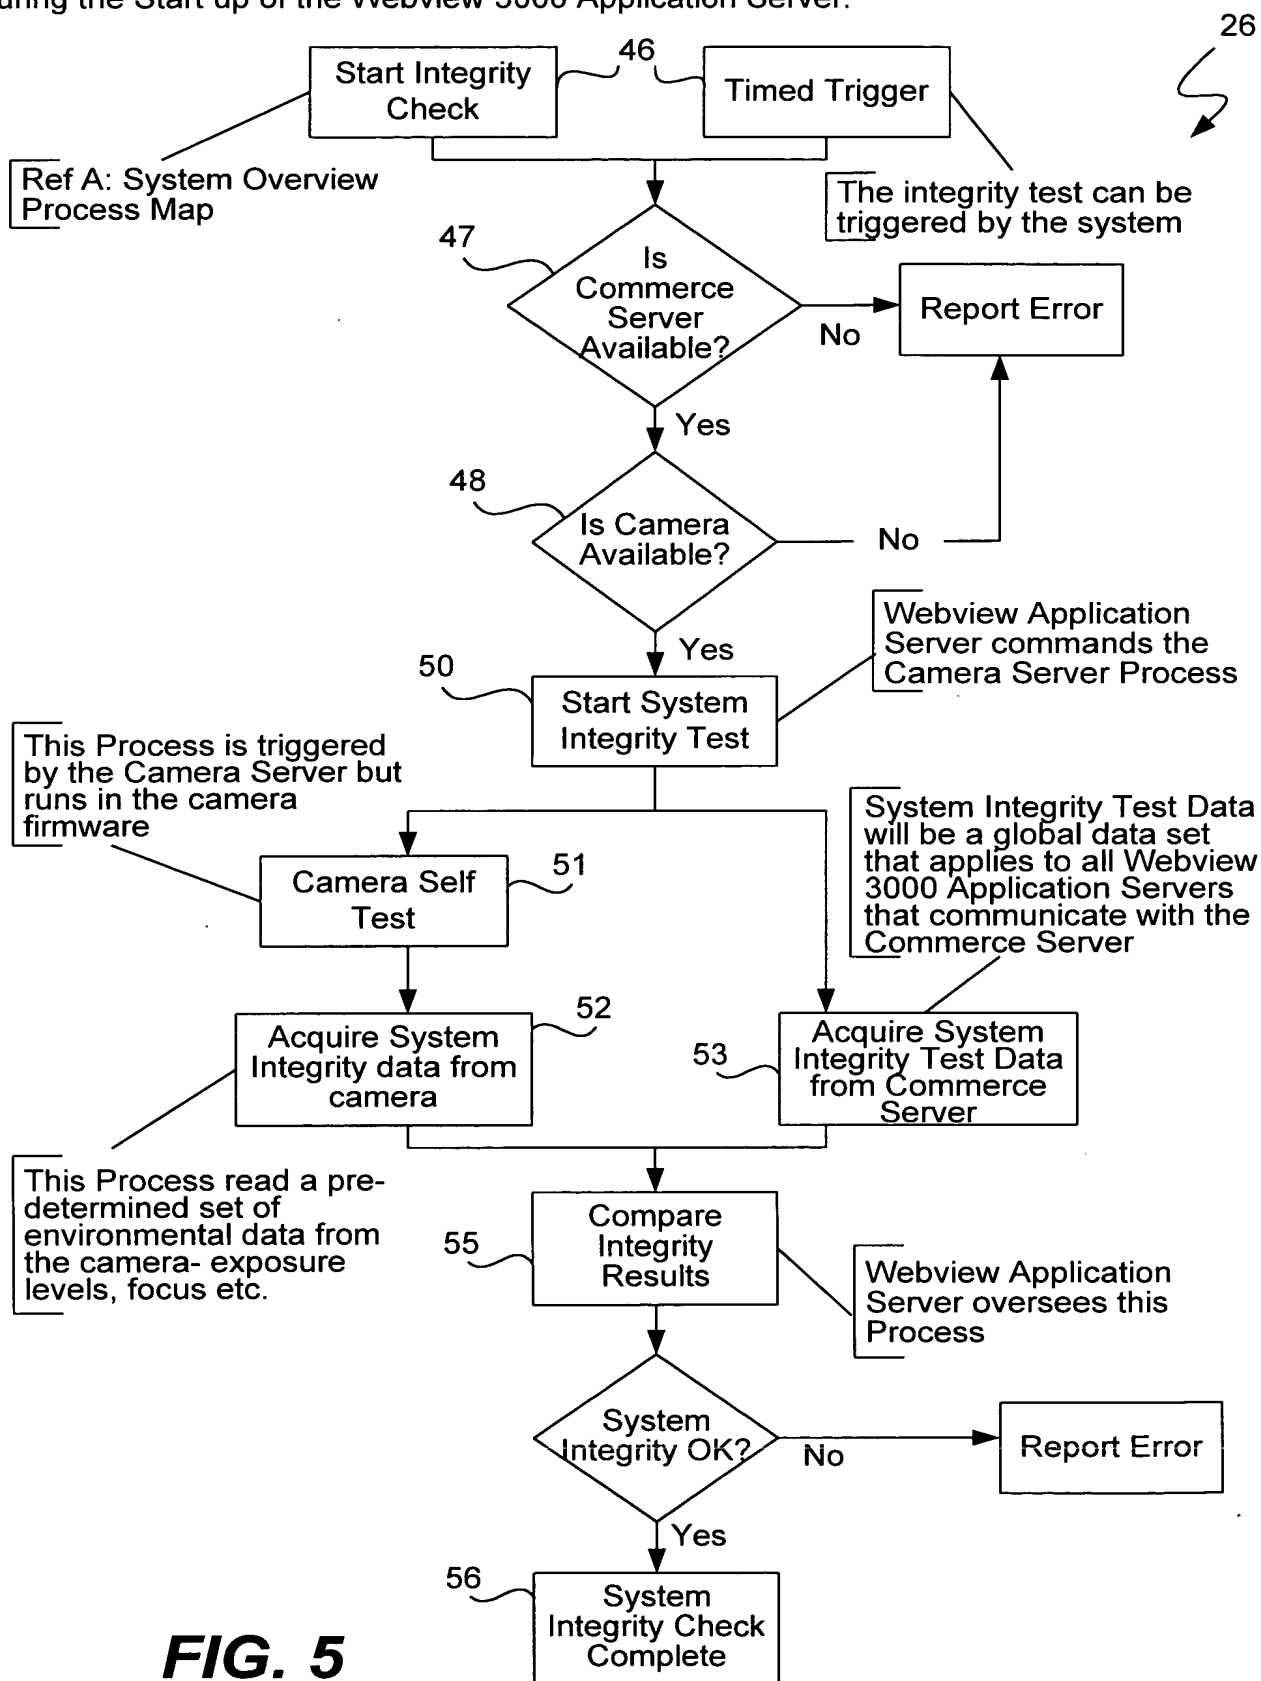

**FIG. 4**

# System Integrity

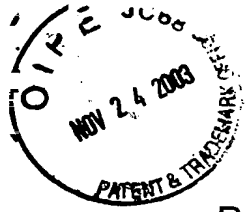

5/11

## System Integrity Test Process

This Process Map describes the System Integrity Check Process that Typically occurs during the Start up of the Webview 3000 Application Server.

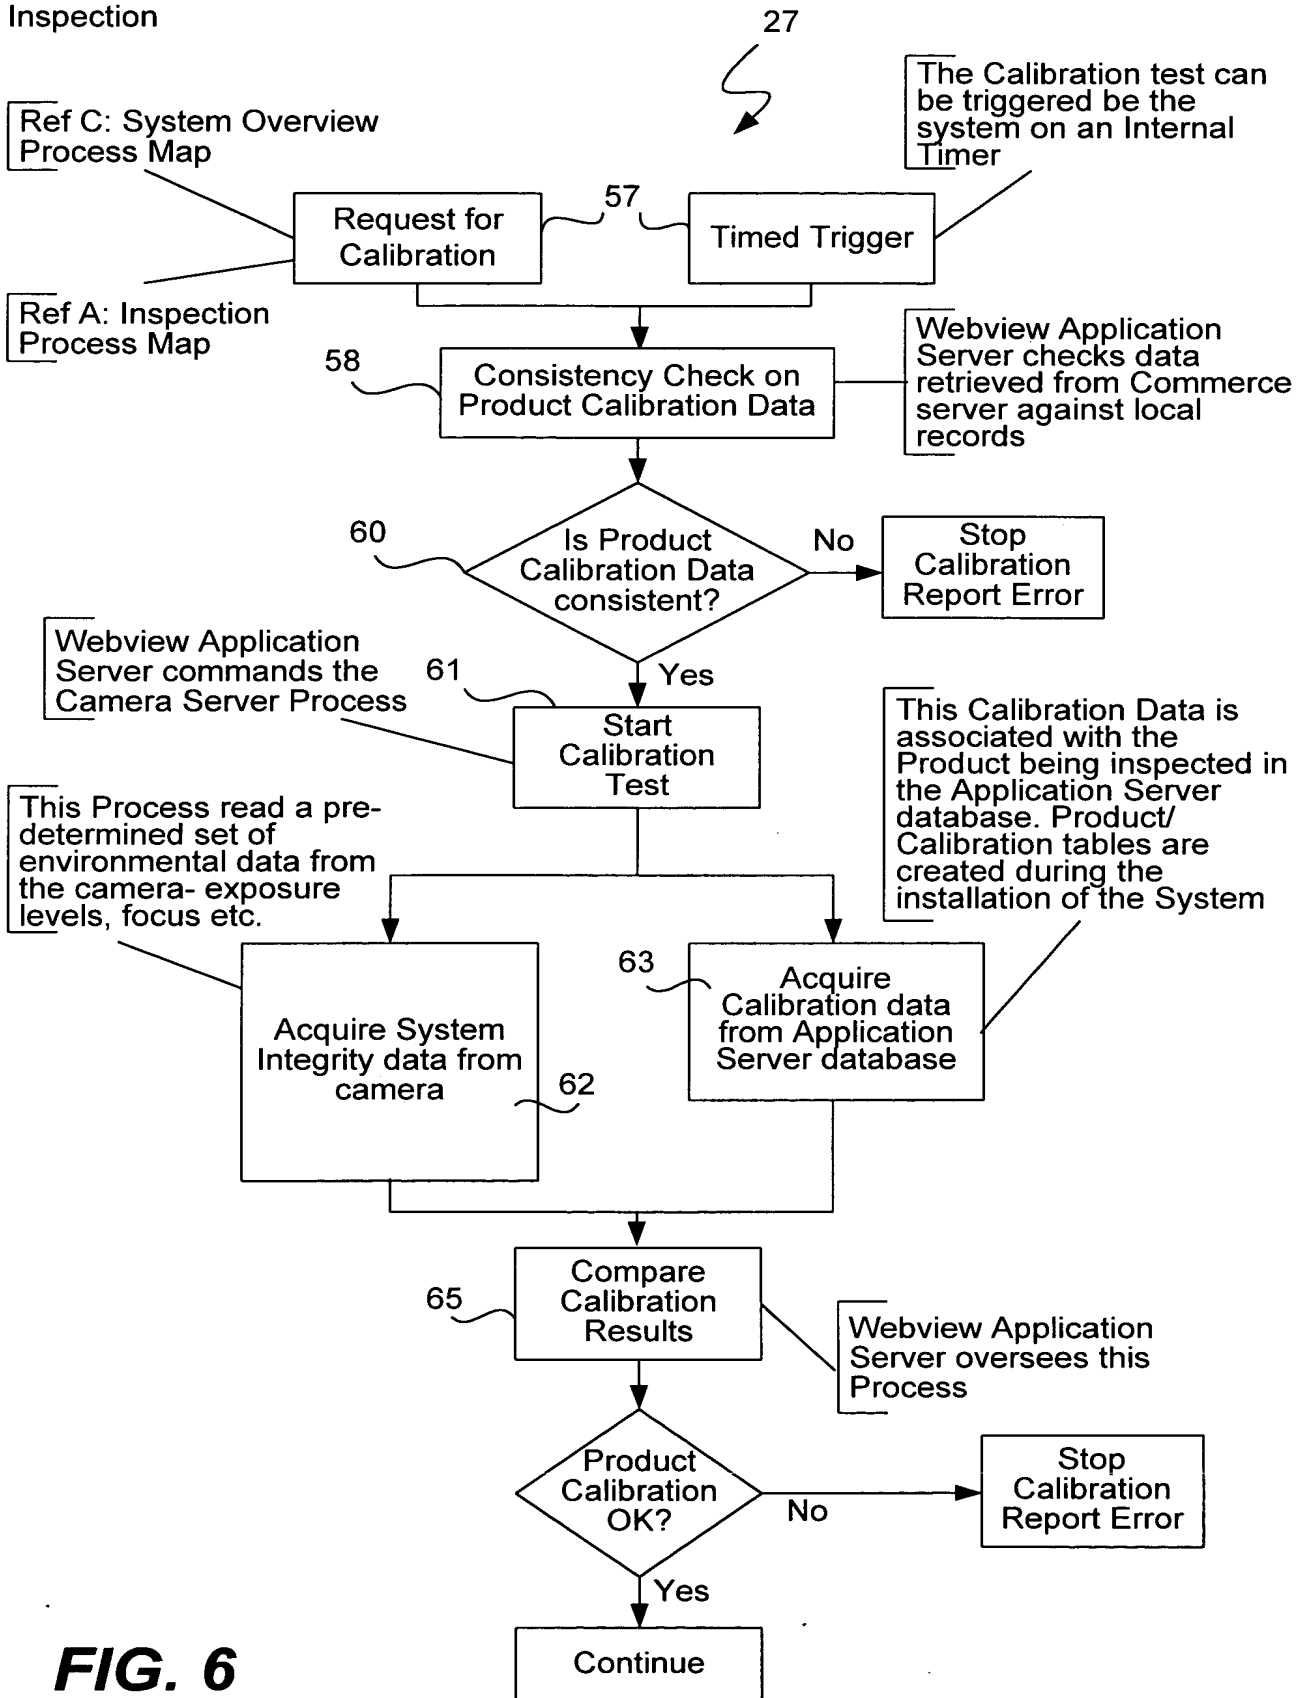

**FIG. 5**

# Product Calibration Product Calibration Test Process

6/11

This Process map describes the Calibration Process that occurs during a product Inspection

**FIG. 6**

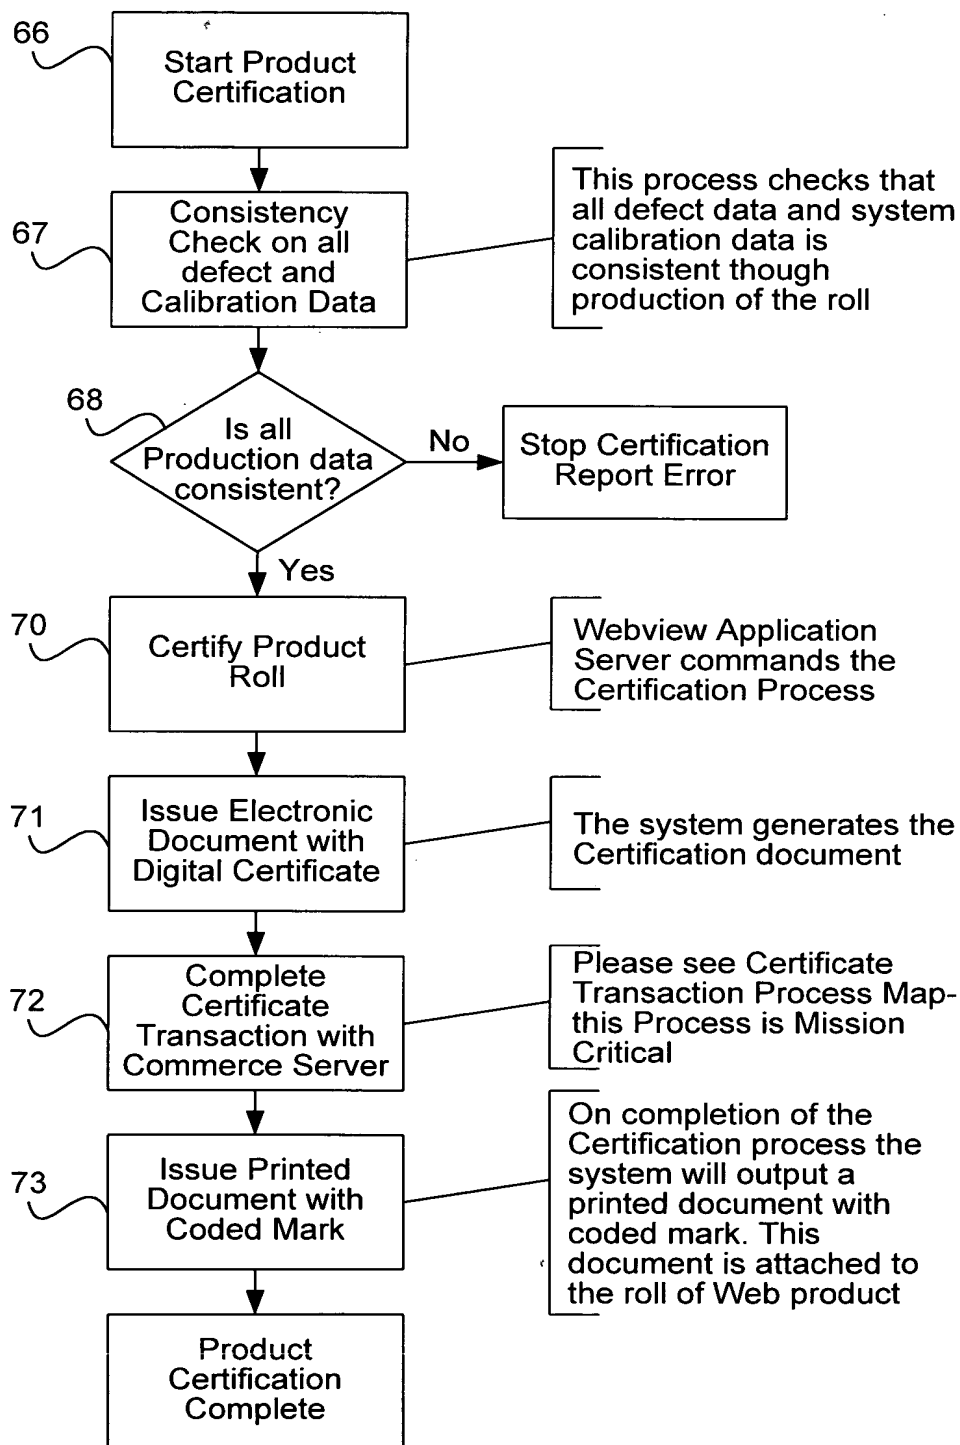

## Product Certification

7/11

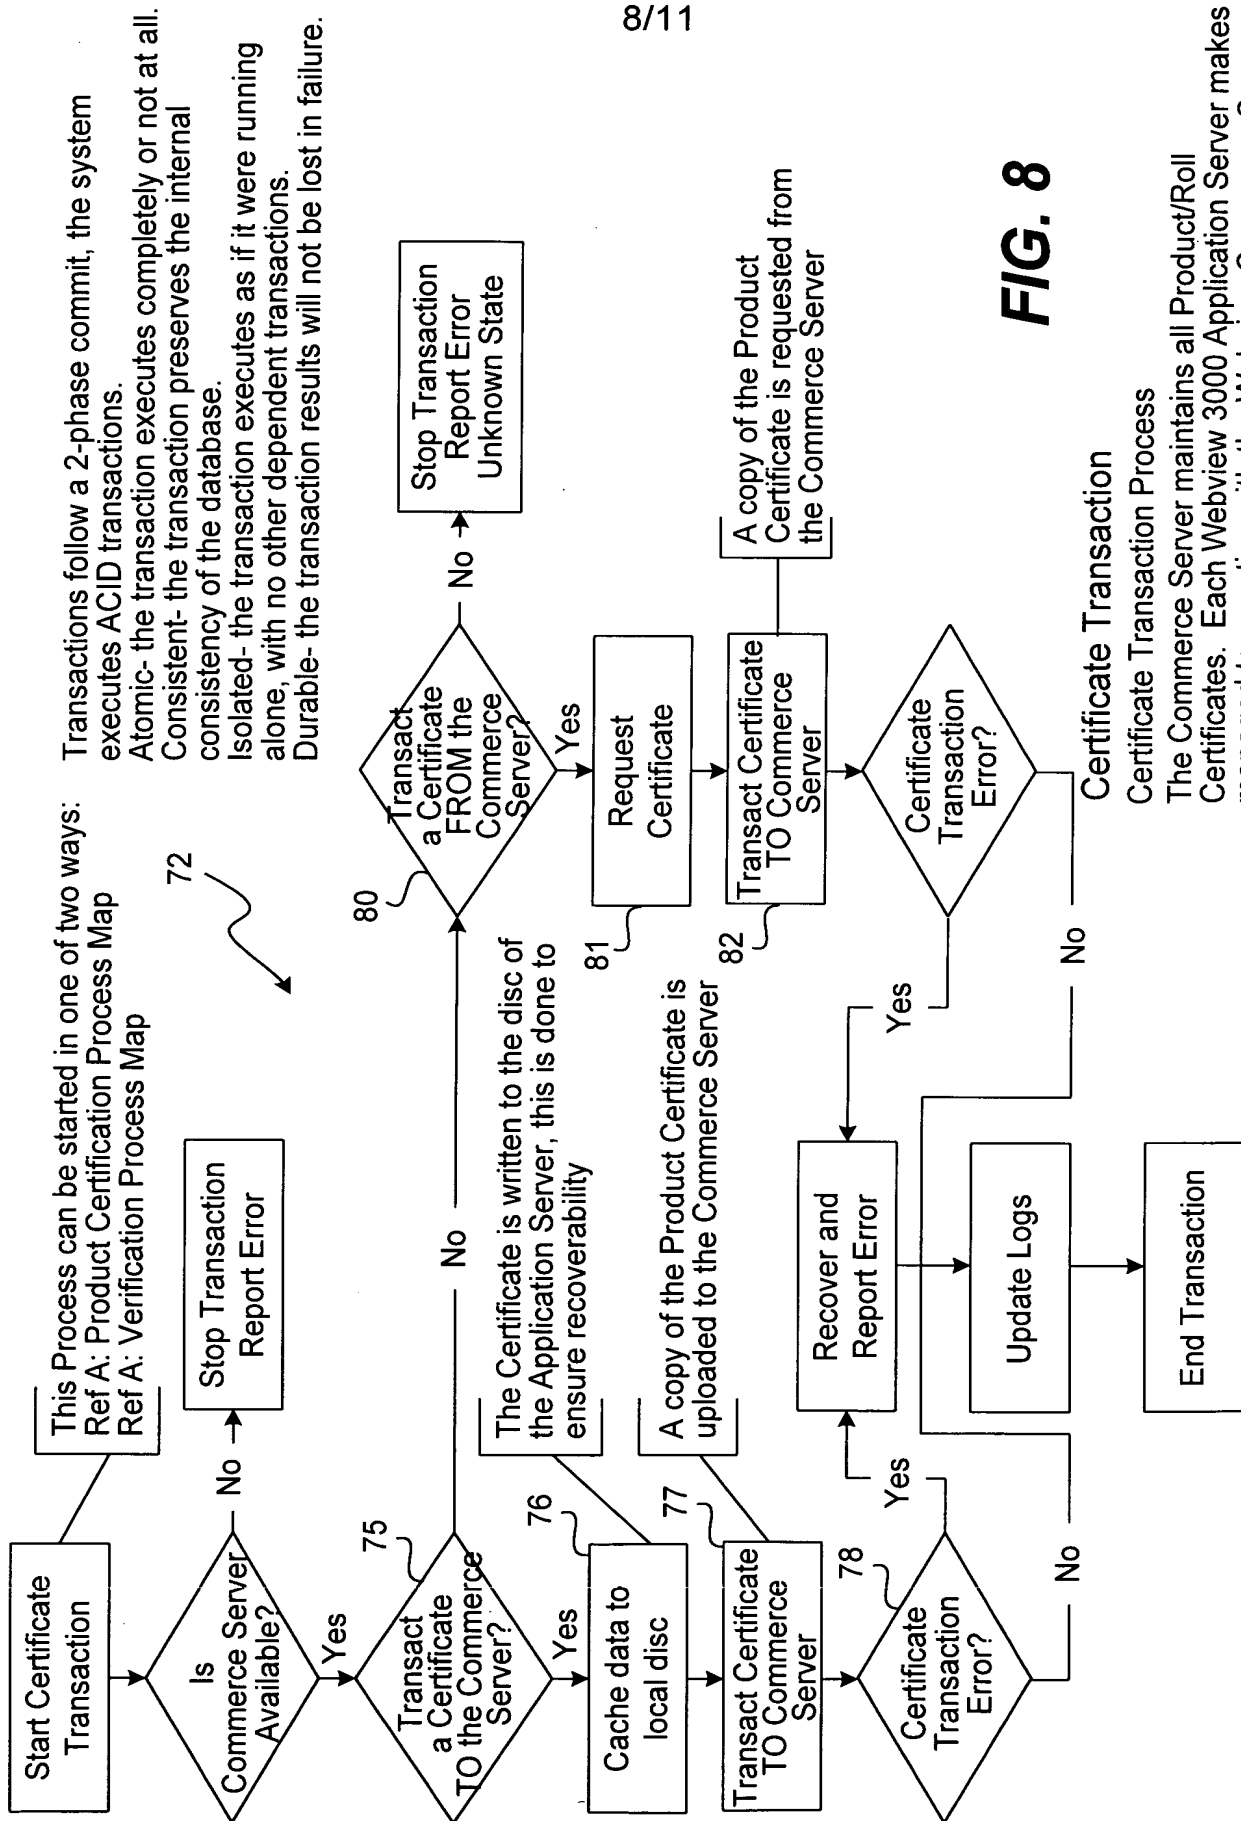

### Product Certification Process

This Process Map describes the Certification of a Roll of Web product.

25

**FIG. 7**

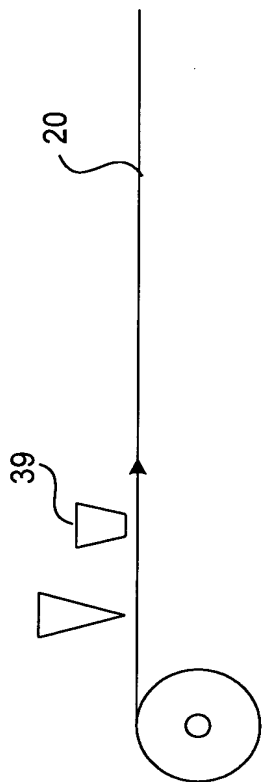

Transactions follow a 2-phase commit, the system executes ACID transactions.

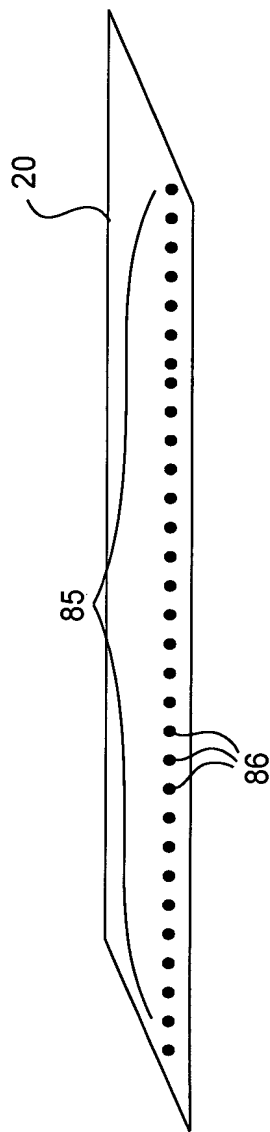

Atomic- the transaction executes completely or not at all.  
 Consistent- the transaction preserves the internal consistency of the database.

Isolated- the transaction executes as if it were running alone, with no other dependent transactions.

Durable- the transaction results will not be lost in failure.

## Verification

11/11

### Product Verification Process

This Process Map describes the Verification of a Roll of Web product.

Verification occurs when a Roll undergoes re-inspection and the process checks the original inspection data against the secondary inspection data.
